

Medicine

Option #1 is generally oral medication to block pain or reduce inflammation. Course of treatment is generally 2-3 weeks. Symptom based.

Option #2 is a course of injections. A wide range of injections are available. Course of treatment may be weeks or months based on trial and error. Symptom based.

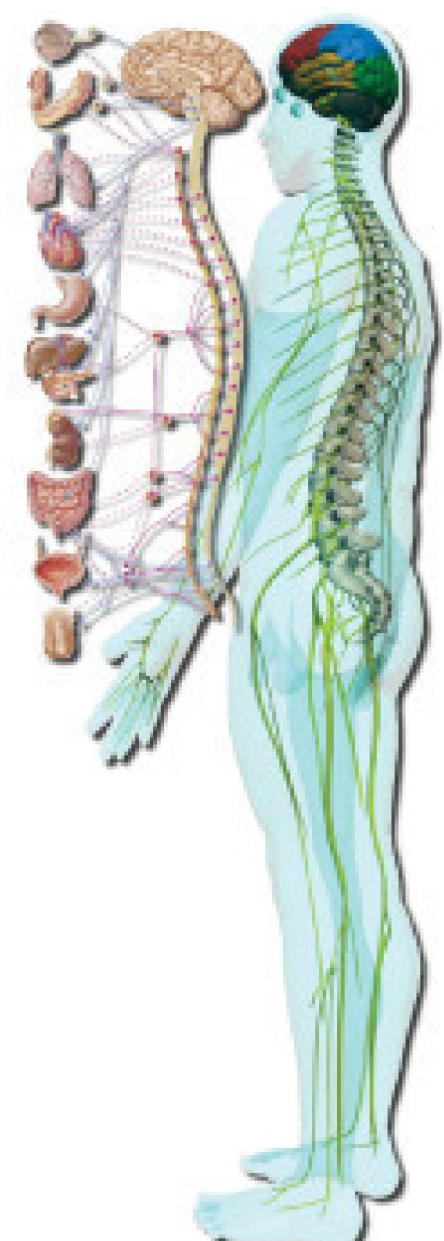

Option #3 is surgery. May be minor or major. Recovery can be weeks or months. Causal based.

Generally if option #1 doesn't work the patient is advanced to option #2, then option #3.

Total time to advance through the medical system is about 2 years.

If no help is received through these three options the patient usually repeats the options with a different doctor.

Chiropractic

A Doctor of Chiropractic understands the relationship of the Central and Autonomic nervous system to health and is an expert in spinal care.

A Chiropractor will find the cause of your pain and malfunction ("dis-ease") rather than just treat the symptoms.

By aligning the spine, the nerve channels are opened more fully, allowing the body the opportunity to either correct or reduce the main cause of the health problem.

Keeping your spine in the best alignment possible minimizes your accumulated degeneration, while maximizing your ability to stay healthy.

Hippocrates, the father of modern medicine, said, "Look well to the spine for the cause of disease."

Thomas Edison, one of the great minds of the 20th Century said, "The doctor of the future will give no medicine, but will interest his patients in the care of the human frame, in diet, and in the cause and prevention of disease."
